

example 132: Example 131 & 132 show the same hull with 2 different transmission solutions. In example 131 the reduction gearbox is mounted under the pedestal hanging at the cockpit floor. This is the most simple solution, but it occupies some space underneath the cockpit floor. When this space is needed for the accomodation, a bevelbox can be mounted under the pedestal (example 132), so the reduction box can be mounted further aft. Please have a look at example 131 for the alternative solution.
